

Navigation bar

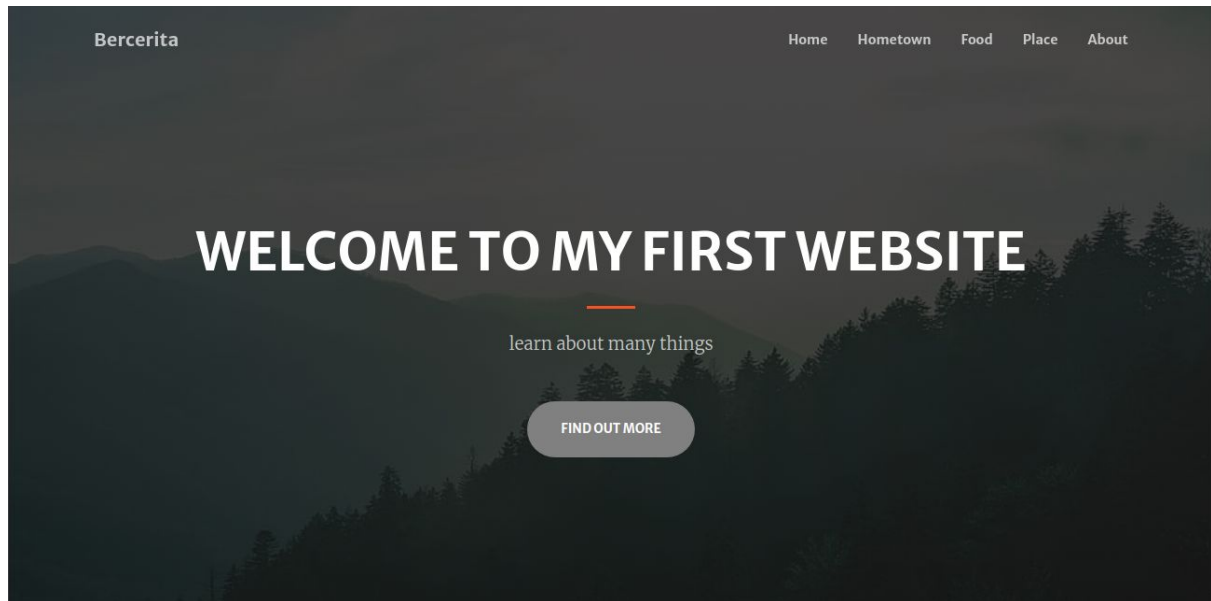

Code:

```
<nav class="navbar navbar-expand-lg navbar-light fixed-top py-3" id="mainNav">
  <div class="container">
    <a class="navbar-brand"
href="/home/anisa/Kuliah/PWeb/cobaWeb/index.html">Bercerita</a>
    <button class="navbar-toggler navbar-toggler-right" type="button"
data-toggle="collapse" data-target="#navbarResponsive"
aria-controls="navbarResponsive" aria-expanded="false" aria-label="Toggle
navigation"><span class="navbar-toggler-icon"></span></button>
    <div class="collapse navbar-collapse" id="navbarResponsive">
      <ul class="navbar-nav ml-auto my-2 my-lg-0">
        <li class="nav-item"><a class="nav-link "
href="/home/anisa/Kuliah/PWeb/cobaWeb/index.html">Home</a></li>
        <li class="nav-item"><a class="nav-link"
href="/home/anisa/Kuliah/PWeb/cobaWeb/home.html">Hometown</a></li>
        <li class="nav-item"><a class="nav-link"
href="/home/anisa/Kuliah/PWeb/cobaWeb/food.html">Food</a></li>
        <li class="nav-item"><a class="nav-link"
href="/home/anisa/Kuliah/PWeb/cobaWeb/place.html">Place</a></li>
        <li class="nav-item"><a class="nav-link"
href="/home/anisa/Kuliah/PWeb/cobaWeb/contact.html">About</a></li>
      </ul>
    </div>
  </div>
</nav>
```

I use this code to navigation bar at all page. To layouting, I use bootstrap in css file.

Homepage

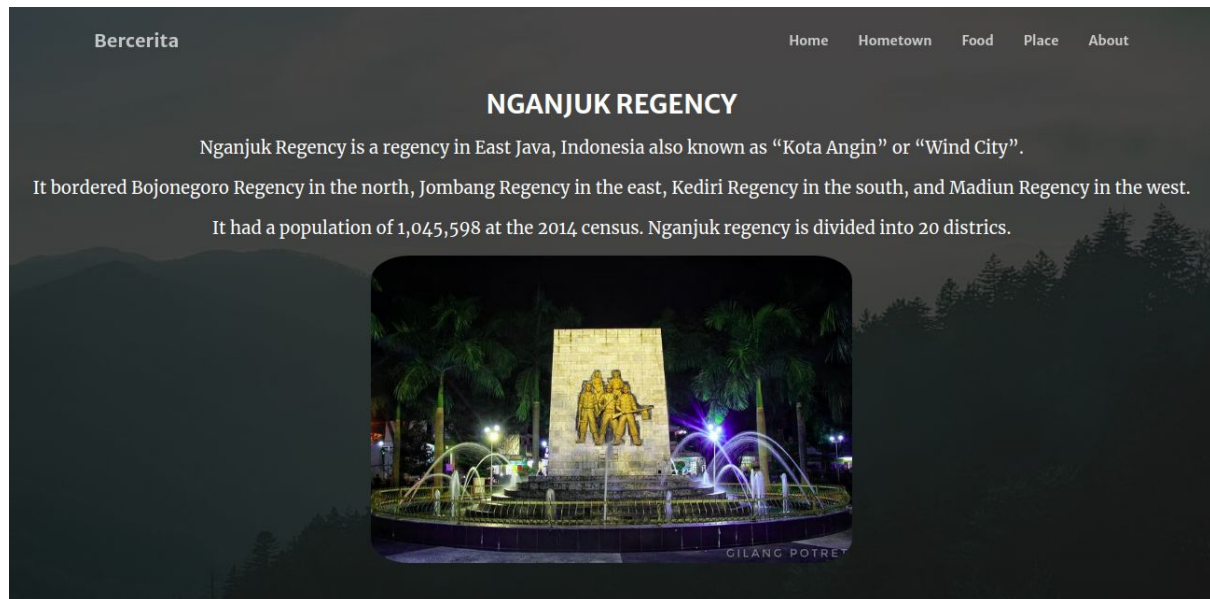

Code:

```
<header class="masthead">
  <div class="container h-100">
    <div class="row h-100 align-items-center justify-content-center
text-center">
      <div class="col-lg-10 align-self-end">
        <h1 class="text-uppercase text-white
font-weight-bold">WELCOME TO MY FIRST WEBSITE</h1>
        <hr class="divider my-4" />
      </div>
      <div class="col-lg-8 align-self-baseline">
        <p class="text-white-75 font-weight-light mb-5">learn about
many things</p>
        <a class="btn btn-primary btn-xl"
href="/home/anisa/Kuliah/PWeb/cobaWeb/home.html">Find Out More</a>
      </div>
    </div>
  </div>
</header>
```

I create a simple one to homepage. The button will redirect to *hometown* page. I put many *div* to set each part on page.

Hometown

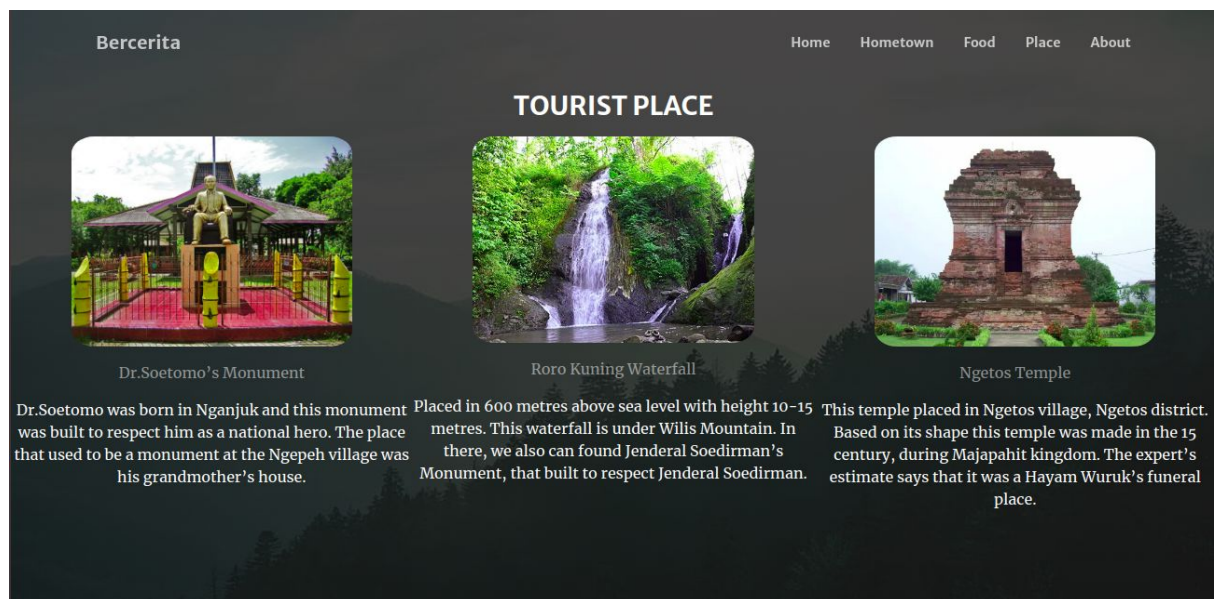

Code:

```
<header class="masthead">
    <p></p> <p></p>
    <h3 class="text-white font-weight-bold text-center">NGANJUK REGENCY</h3>
    <p></p> <p></p>
    <p class="text-white text-center">
        Nganjuk Regency is a regency in East Java, Indonesia also known
as "Kota Angin" or "Wind City".
    </p>
    <p class="text-white text-center">
        It bordered Bojonegoro Regency in the north, Jombang Regency in
the east, Kediri Regency in the south, and Madiun Regency in the west.
    </p>
    <p class="text-white text-center">
        It had a population of 1,045,598 at the 2014 census. Nganjuk
regency is divided into 20 districts.
    </p>
    
</header>
```

The navigation and background is same like homepage. The different just in materials. I put paragraph and image.

Place

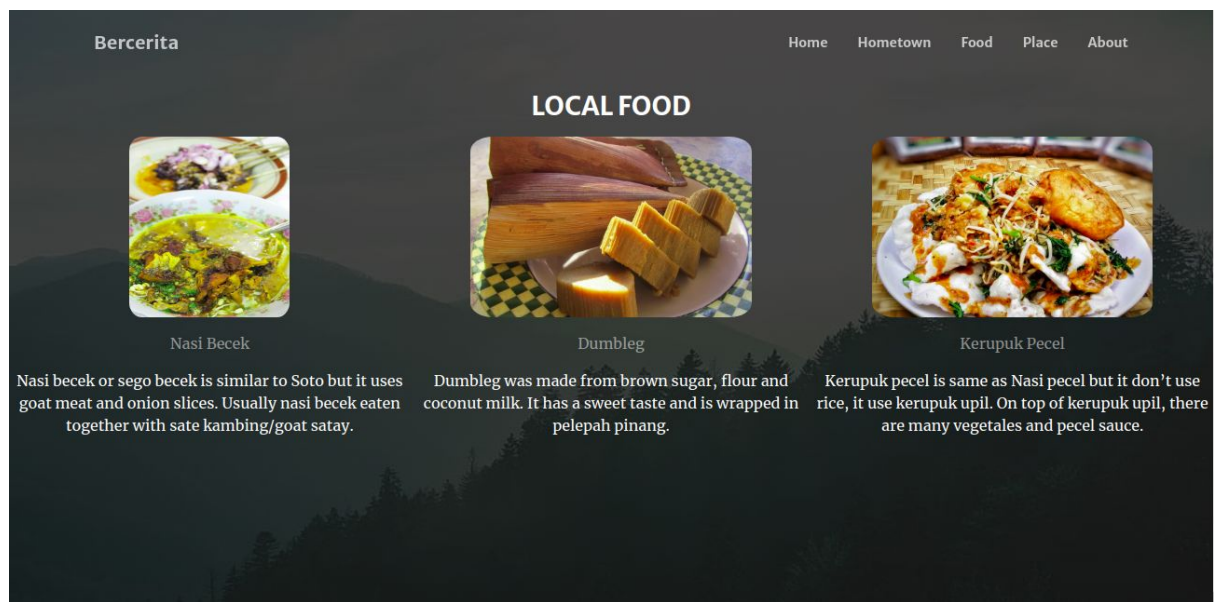

Code:

```
<div class="col-lg-4 col-sm-6">
    <a class="portfolio-box">
        
        <div class="portfolio-box-caption">
            <p></p>
            <div class="project-category text-white-50
text-center">Dr. Soetomo's Monument</div>
            <p></p>
            <div class="project-name text-center
text-white">Dr. Soetomo was born in Nganjuk and this monument was built to respect
him as a national hero. The place that used to be a monument at the Ngepeh village
was his grandmother's house.</div>
        </div>
    </a>
</div>
```

Code in above just one of three image in web. I just put paragraph and image like previous page.

Food

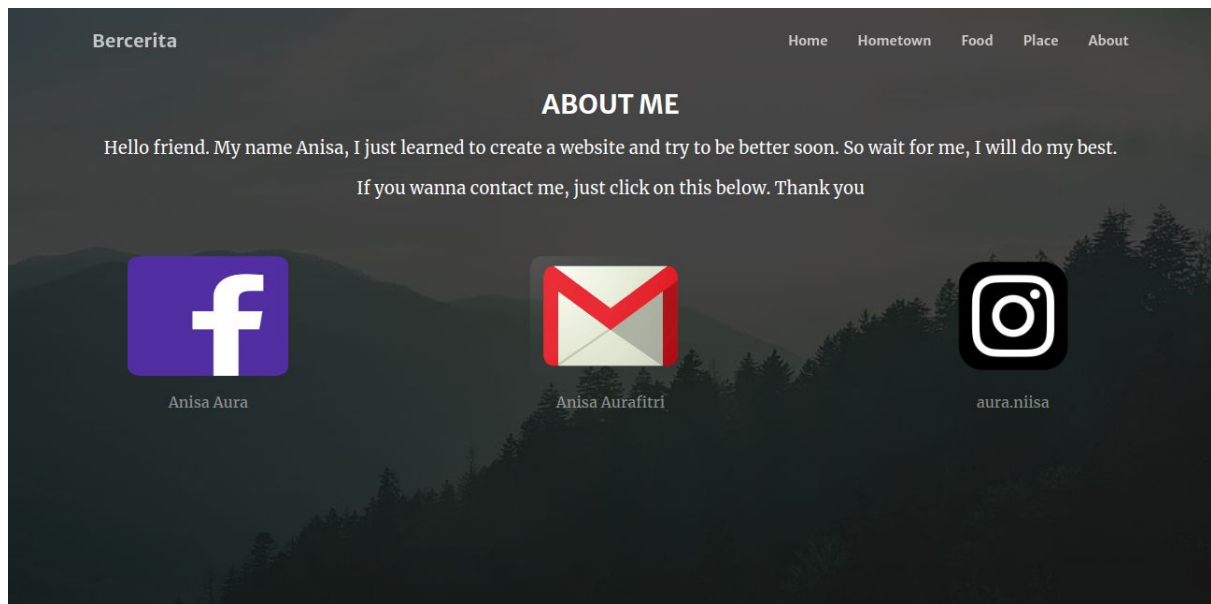

Code:

```
<div class="col-lg-4 col-sm-6">
    <a class="portfolio-box">
        
        <div class="portfolio-box-caption">
            <p></p>
            <div class="project-category text-white-50
text-center">Nasi Becek</div>
            <p></p>
            <div class="project-name text-center
text-white">Nasi becek or sego becek is similar to Soto but it uses goat meat and
onion slices. Usually nasi becek eaten together with sate kambing/goat satay.</div>
        </div>
    </a>
</div>
```

The code same as before. No special things added.

About

Code:

```
<div class="col-lg-4 col-sm-6">
    <a class="portfolio-box"
href="https://facebook.com/anisa.aurafitri">
        
        <div class="portfolio-box-caption">
            <p></p>
            <div class="project-category
text-white-50 text-center">Anisa Aura</div>
        </div>
    </a>
</div>
```

In this page, the difference is when click the image it will redirect to my social media page or mail me.

Note:

I'm sorry, Sir. I have problem when change routing url, so my website don't use routing url that yo want.
